# 18-19-20-Module-2 Capstone Design Suggestion

Client Starter Project

```
tenmo-client [module-2--capstone-client] C:\
  .idea
  logs
    .gitkeep
    2023-03-28.log
  src
    main
      java
        com.techelevator
          tenmo
            model                    → Put any new POJOs for the app here
            security.model           → User Management components, probably don't need to change
            services                 → Add new service(s) in this package
              AuthenticationService  ← DO NOT CHANGE ANYTHING IN THIS PACKAGE!
              ConsoleService         → Any user interactions should be placed in here
            App
          util                       → BasicLogger class - Probably do not have to change anything in this package
      resources
```

Server Starter Project

```
tenmo-server [module-2-capstone-server] C
  .idea
  .mvn
  src
    main
      java
        com.techelevator
          generalpurposeutilities    → Contains LogApiRequest class for writing to server console
          tenmo
            controller               → Put any new Controller classes in this package
            datasource               → Put any Tenmo data access classes in this package
            javasecurity             ← DO NOT CHANGE ANYTHING IN THIS PACKAGE!
            usermanagement.model     → Should not have to change anything in here. Check with instructor if you think you do.
            TenmoApplicationServer
```
